Customer Problem Statement Template:

The Medical Diagnosis Center by Service Portal project focuses on understanding the challenges faced by patients and diagnostic center staff during appointment booking, report management, and payment processing. This problem statement helps identify customer needs and design a user-friendly ServiceNow solution that improves healthcare service management.

A well-defined customer problem statement helps our team understand the real difficulties experienced by patients and hospital staff. Based on these challenges, we designed a ServiceNow Service Portal that automates diagnostic test booking, appointment scheduling, report management, notifications, and payment tracking.

Customer Problem Statements (Table)

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A patient visiting a medical diagnosis center.	Book a diagnostic test quickly and choose an available appointment slot online.	I have to wait at the reception and manually check available slots.	The appointment booking process is handled manually and slot availability is not updated in real time.	Frustrated and inconvenienced
PS-2	A patient who completed a diagnostic test.	View and download my medical reports online without visiting the center again.	I need to return to the diagnosis center or contact staff to collect the management report.	Reports are stored manually and there is no centralized digital report management system.	Confused and dissatisfied.
PS-3	A lab technician	Update sample collection and report processing status easily.	I have to manually update records and inform patients separately.	There is no automated workflow or notification system.	Overloaded and inefficient.

PS-4	A receptionist	Manage patient appointments without scheduling conflicts.	I need to manually verify available slots before confirming appointments.	There is no real-time booking validation or slot capacity control.	Stressed and prone to booking errors.
